

SMART CLINICAL

SMARTWAYS

logistics for life

Revolutionizing Clinical Trial Logistics Streamlined, Safe, and Secure.

Our Smart Clinical platform is designed to meet the specific needs of clinical trials. From shipment tracking to compliance and data integrity, Smart Clinical ensures that every step is seamless and every regulation is met.

We support every phase of your trial with:

Reduced Set-Up Time: We have reduced the setup time from multiple weeks to minutes by have data provided through our online portal, instead of typing details into spreadsheets and then waiting for others to action them.

Data Integrity: With a database of sites all around ANZ, managed by the sites themselves, data is accurate and available with the click of your mouse.

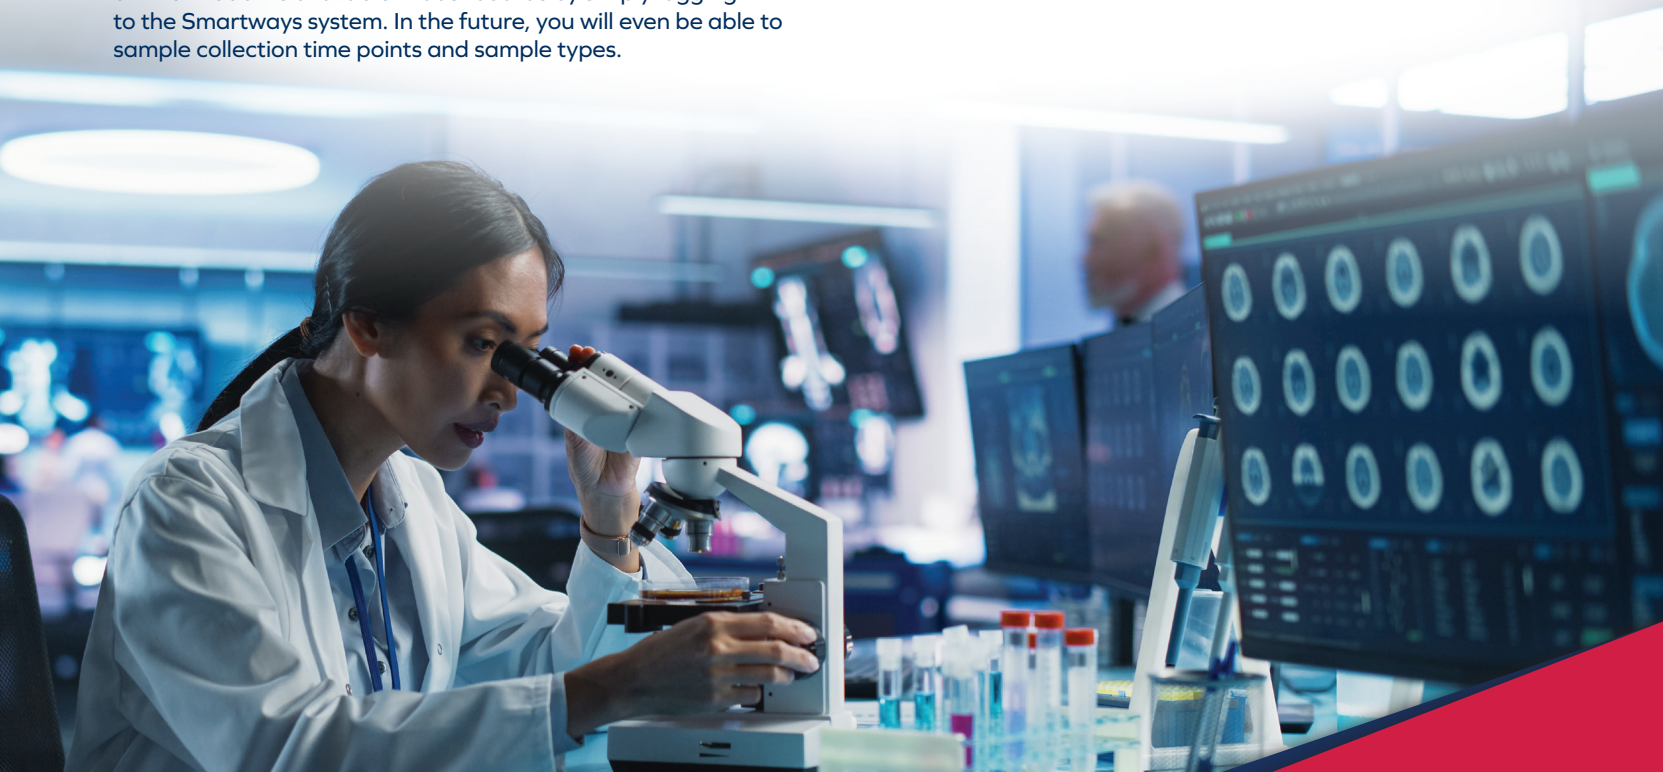

Real-Time Study Adjustments: With all details in one place, you can add and remove sites in seconds, allowing the flexibility.

Real-Time Sample Tracking: With our industry leading technology all information is available in dashboards by simply logging in to the Smartways system. In the future, you will even be able to sample collection time points and sample types.

Site Advantages: Sites will be able to book shipments in a fraction of the time they currently do, allowing better patient care. Sites will also manage their own details, ensuring addresses and contact details are accurate and updated as required.

Green Solutions: No more paper is sent to sites as our setup includes an email and all relevant details are within the portal and found using the study protocol as a unique identifier. And of course, Smartways is still 100% carbon neutral.

No lost paperwork: All details stored in one place, on SmartClinical
